Year End Message

As we wind down to the end of 2015, it is a good time to look back at the year that was. 2015 was an exciting year for Intaver Institute as we saw growth into new markets, new and strengthened partnerships, and several updates to our growing suite of project risk analysis and management software.

We had a very busy year developing and improving our core risk analysis and management capabilities as well as diversifying the number of software tools that we integrate with. With the release of version 6.1.2 in February, we could now provide a simulation engine optimized to run Monte Carlo simulations on multiple computer processing cores and 900% increased performance as compared to earlier versions.

RiskyProject also expanded its ability to integrate with other software and data formats. This includes improved integration with Primavera P6 and other 3rd party software. In November, we finalized our [integration with SNA Software's Proteus](#), which includes the ability to read project schedules saved in UN/CEFACT format.

Intaver Institute expanded its presence at key conferences both supporting key project management conferences as exhibitors, but also provided several well received conference presentations on emerging trends in project risk management. These conferences included the Construction CPM that took place in San Diego in January, the World Congress on Risk in Singapore, and ended with the IPMW in Bethesda.

2015 also saw several new resellers of RiskyProject. We now have [partners](#) in every major region on the globe with the exception of Antarctica, though we are working on that.

We have continued to provide our series of free [webinars](#), as well as added to our growing list of [videos](#) available on social media sites.

Thank you to all of our great customers, strategic partners, resellers, and colleagues for the great year and we wish everyone the best for 2016 and may your risks be opportunities.

Upcoming Webinars

Cost and Schedule Risk Analysis with RiskyProject

Join us for a free webinar and see how you can quickly and simply make risk adjusted cost and schedule estimates for our projects.

Many projects require both cost and schedule risks analyses. Done separately, assumptions regarding time sensitive (resource) costs are often not aligned with the project schedule resulting in inaccurate cost estimates. This webinar will show you how to use resource loaded project schedule to generate accurate cost and schedule risk analyses:

- identify risks and uncertainties related to task durations, start and finish time, cost and resources
- perform Monte Carlo simulation
- analyze risk-adjusted project schedule
- perform probabilistic cost and work analysis of project schedules

Date: Tuesday, Jan 12, 2016

Time: 10:00 AM - 11:00 AM MST (UTC-07:00)

[Register for the webinar](#)

Partners Wanted

Intaver Institute is looking for partners to enhance and promote our RiskyProject software. We have a number of partner programs:

- consulting partners
- resellers: we offer attractive reseller discounts and support
- integration partners: RiskyProject can be integrated with any other project management and scheduling software

If you are interested in joining our partner network, please contact us at sales@intaver.com.

Upcoming Events

Construction CPM Conference

January 31 - February 5, 2016
Sheraton Canal Street,
New Orleans, LA
